DETAILED ACTION

Claim Objections

1. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not). In the instant application, there are two claims that are numbered 14. Appropriate correction is required.

Specification

2. The abstract of the disclosure is objected to because it exceeds 150 words, the maximum number of words an abstract can have. Correction is required. See MPEP § 608.01(b).

Election/Restrictions

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-13 and, drawn to a machine vision system, classified in class 356, subclass 394.
 - II. Claims 14-18, drawn to an illumination method, classified in class 348, subclass 370.
 - III. Claims 19-23, drawn to a machine vision inspection method, classified in class 382, subclass 145.

The inventions are distinct, each from the other because of the following reasons:

4. Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a film scanner illumination system and method. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

6. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a film scanner illumination system and method. See MPEP § 806.05(d).

7. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

8. Inventions III and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a photographic image acquisition system and method. See MPEP § 806.05(d).

9. Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Group I, restriction for examination purposes as indicated is proper.
